E-LEARNING WEBSITE

This is to certify that Shahra Musam Ali of 2nd year 2st semester HNDIT student have satisfactorily completed their project report on “E-Learning Management System” for the LearnWiz learning centre during academic year 2020-2021.

_____ _____

Project Guide Head of the Department

DECLARATION

I do hereby declare that the work reported in this project was exclusively carried out by me under the supervision of our head of the department Mrs. Y.M.R.D.Wepathana and department lecturer Mrs.A.H.M.T.C.Bakmeedeniya of the department of information technology, Advance Technological Institute-Kegalle, Sri Lanka. It describes the results of my own and independent work except where due references have been made in the text. No part of this project report has been submitted earlier or concurrently for the same or any other diploma.

Certified By:

1. Head of the department :
   Date :
   Signature :

2. Supervisor :
   Date :
   Signature :

DEDICATION

The project is dedicated to Sri Lankan institute LearnWiz learning centre SRI LANKA.

ACKNOWLEDGEMENT

It now gives me great pleasure to express our gratitude to those who in special measure have aided me in this project.

Special thanks to the head of the department Mrs.Y.M.R.D. Wepathana and lecturer Mrs.A.H.T.C.Bakmeedeniya of the department of technology, for their suggestions, advice and guidance.

I would like to thank my family for their morals. I will not forget to appreciate our colleagues, who directly or indirectly aided in the completion of this work, thank you all.

On a final note, I offer our regards to all of those who support me in any respect during the completion of the project.

ABSTRACT

The work is concerned with the E-Learning management system (website). The system was designed using the waterfall methodology and implemented using VS CODE on a windows 10 system, using PHP, HTML, CSS and MySQL technologies.

INTRODUCTION

Though the technology is developed, when it comes to teaching material, they were uploaded in document form & they were added when the website was created. In registration, we still face a manual based system. In this project we try to show an online registration and dynamic website with explanation videos for the LearnWiz learning centre, where currently student registrations are done manually.

1. ANALYSIS OF PROPOSED SYSTEM

1.1 User Requirements

1.1.1. Functional Requirement

- Have two login methods. One is for an admin (tutor) with full control, he/ she can upload, update video, create playlist, delete videos and comments. Another one for students.
- Student & tutors can create accounts
- Students can comment under videos.
- Students can see the counts of their likes and comments.
- Students can see the profiles of tutors.
- Students can update profiles.
- Students can like videos.
- Tutors can create a playlist.
- Tutors can upload videos.
- Tutors can update their profile
- Tutors can reply to comments.

1.1.2 Non-Functional Requirements

- More Reliable
- User Friendly
- Saving of Time
- Securable
- Effectiveness
- Efficiency

1.2 System Requirements

Developed in HTML, CSS, PHP and database technology (MySQL).

- HTML is the markup language used to describe and define the content of a webpage.
- The styling of the web page is done using CSS. This includes link style, layout, colouring, and picture alignment.
- The connection to the database done using the scripting language PHP. In this project, PHP is used for
    - ★ Database connectivity
    - ★ Generating Dynamic content in the application

1.3 Feasibility Study

A comprehensive feasibility study of social, economic and technical aspects has also been made and implemented as below

1.3.1. Technical Feasibility

- Interface for this system can be designed using notepad++, Sublime Text, VS Code
- Database for this project can be done with use of phpMyAdmin and MySQL.
- PCs with core i3, i5 process or, 8GB of RAM and 475 GB of Hard Disk running with windows 10 for the developing purpose with the main requirements to run above software and tools.

- main requirements to run above software and tools.

1.3.2. Economic Feasibility

- All the tools and software used to design and implement the system are open-source software. There for cost development is reducing by a considerable amount

1.3.3. Legal Feasibility

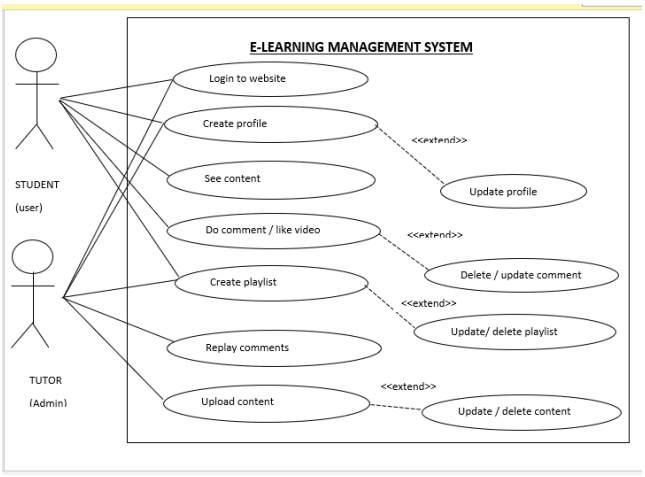

- Not used any other brand trademarks or logos.

2.DESIGN OF PROPOSE SYSTEM

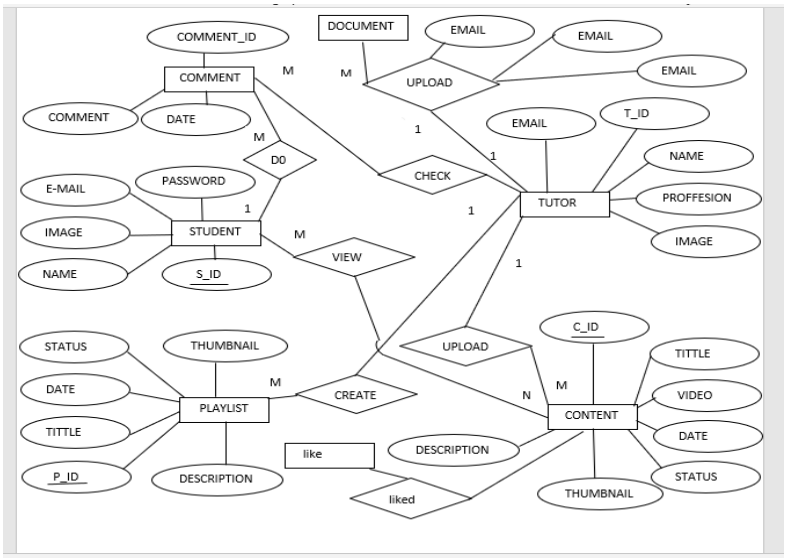

2.1 Use Case Diagrams

Actors	Cases
Student	Check videos, do comment, do like,
Registered Customer	Log into system, give feedback, give rating, logout system, room booking
Admin	Change theme, manage users, upload images to gallery, manage user name password, log into system

USE CASE DIAGRAM

2.2 ER DIAGRAM

3: Relational model of the proposed system

3.1 Database Design

- The relational database model was used to design the database

Table 1: Student Table

Field Name	Character length	Data Type
student_id	11	int
name	100	varchar
email	100	varchar
pass	20	varchar
image	-	blob

Table 2: Admin (Tutor) Table

Field Name	Character length	Data Type
tutor_id	20	int
name	100	varchar
profession	100	varchar
email	100	varchar
pass	20	varchar
image	-	blob

Table 3: Content Table

Field Name	Character length	Data Type
content_id	20	int
tutor_id	20	int
playlist_id	20	int
title	100	varchar
description	255	varchar
video	-	blob
thumb	-	blob
date	-	date
status	20	varchar

Table 4: Playlist Table

Field Name	Character length	Data Type
playlist_id	20	int
tutor_id	20	int
title	100	varchar
description	255	varchar
thumb	-	blob
date	-	date
status	255	varchar

Table 5: Like Table

Field Name	Character length	Data Type
student_id	11	int
tutor_id	20	int
content_id	20	int

Table 6: Comment Table

Field Name	Character length	Data Type
comment_id	20	int
comment	255	varchar
date	-	date
student_id	20	int
tutor_id	20	int
content_id	20	int

Table 7: Document Table

Field Name	Character length	Data Type
doc_id	20	int
filedata	-	blob
filename	50	varchar
tutor_id	20	int

4.IMPLEMENTATION OF THE PROPOSED SYSTEM

In the proposed implementation, the presentation layer is designed using HTML as the user interface, the application layer is designed using PHP that runs on the server and the data layer is designed by using MySQL database server (WAMP control panel).

The tools used for implementation are:

- WAMP server
- Google chrome/ Internet Explorer

SUMMARY

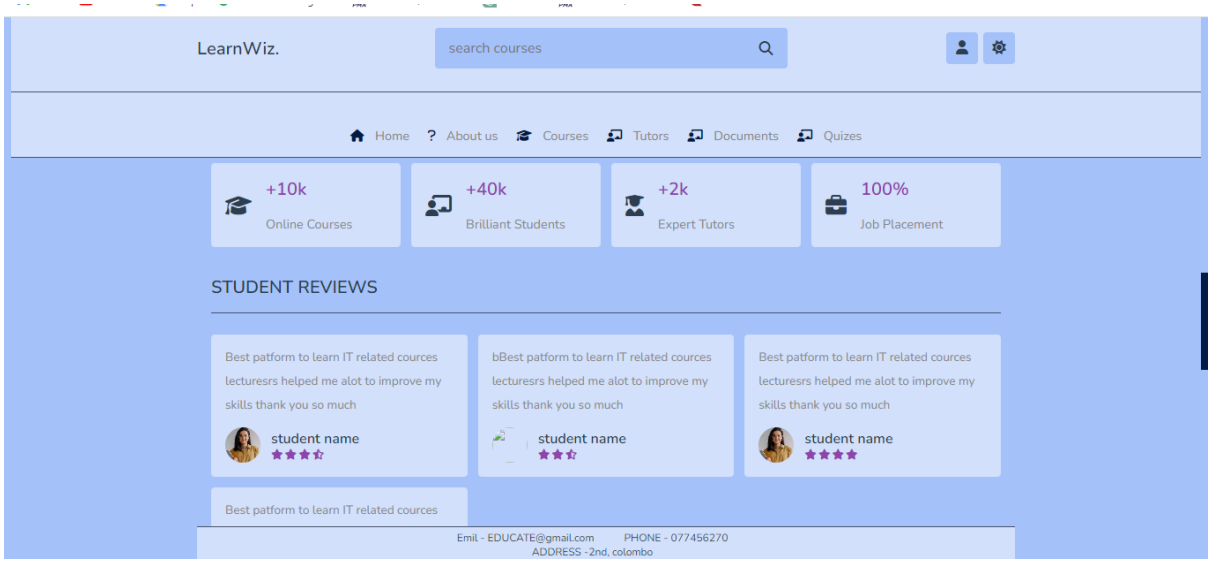

The information system is an E-Learning management system that tutors upload videos and create playlists and students watch those videos do like comment on them, & students and admins create accounts.

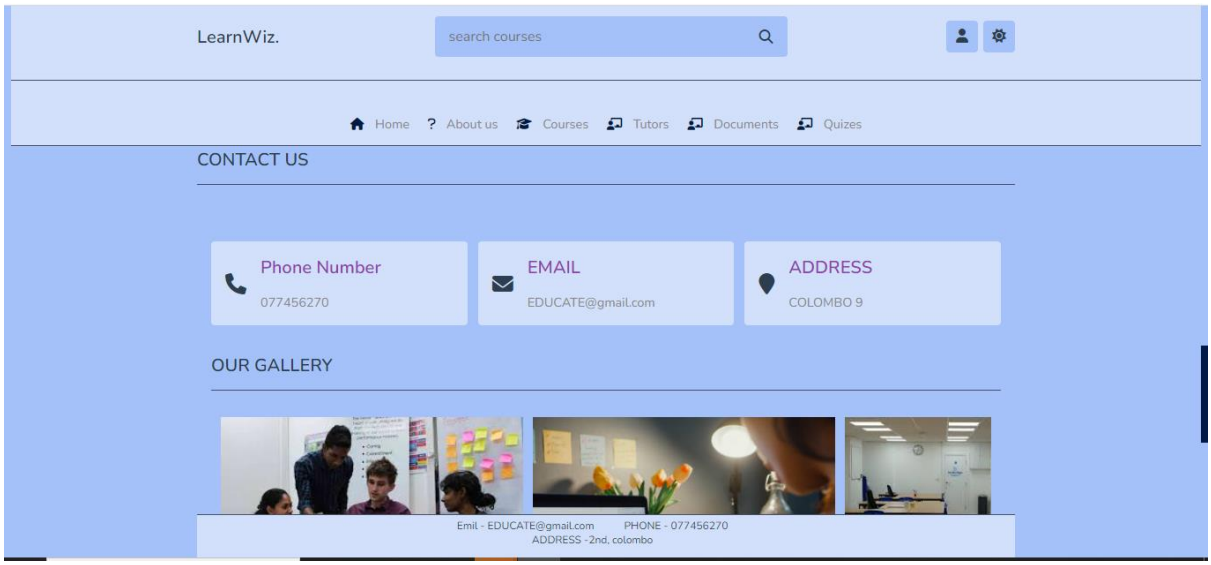

Top-down approach was adopted as the implementation approach for this project research. This involves breaking complex systems into subsystems and then into modules for easy study and understanding. The system architecture is basically divided into three basic parts. the first is the front end that shows the user interface designed with HTML, CSS, and PHP the back end which holds the database server and different tables, at the middle is the internet Information service or application server using the Apache server, which provides the connectivity between the front end and the back end. The user interface is interactive. The use of the system is relatively simple and the IT knowledge requirement for its usage is relatively minimal. The system is reusable, meaning that it can be further expanded or other features can still be added into the system to strengthen and better the system.

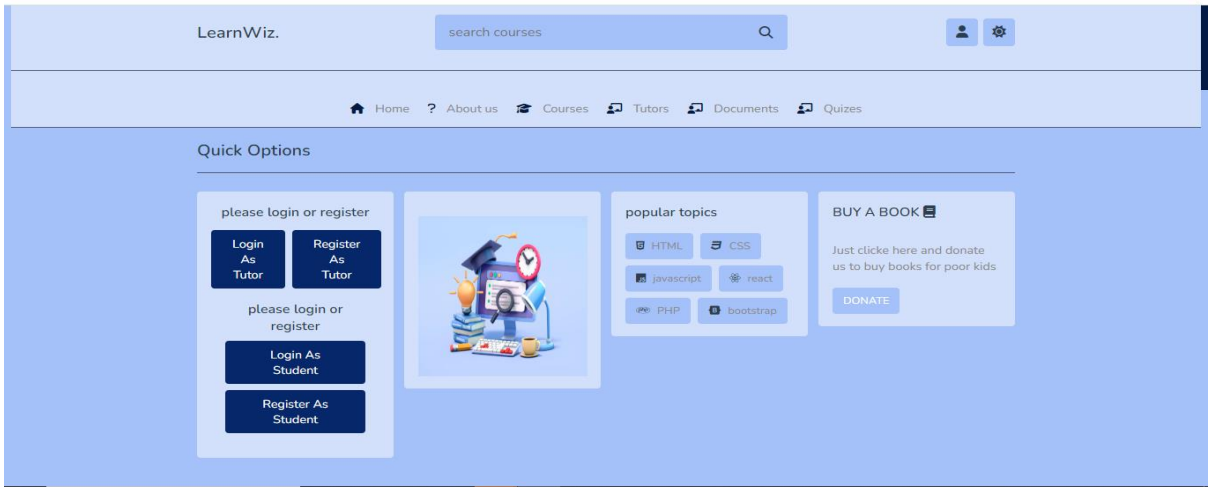

CONCLUSION

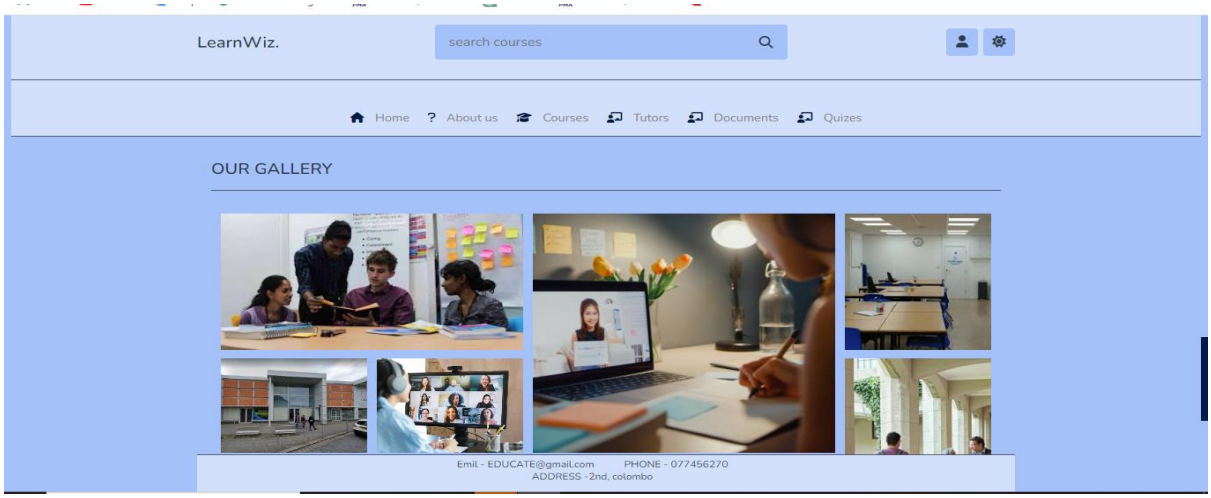

Having developed the E-Learning management system, it is subjected to modification on its features as time goes on. This system through its interactive interface can increase the number of students, students can watch videos and comment on them & interact with tutors through that. This is a very creative website that can store the record of each student & tutors and it can also recall when needed.

DONATE

- These 4 pictures are the guest HOME page of LearnWiz website, viewers can see only HOME & ABOUT pages.
- By clicking registration link, it will redirect to registration page
- By clicking login link, it will redirect to login page

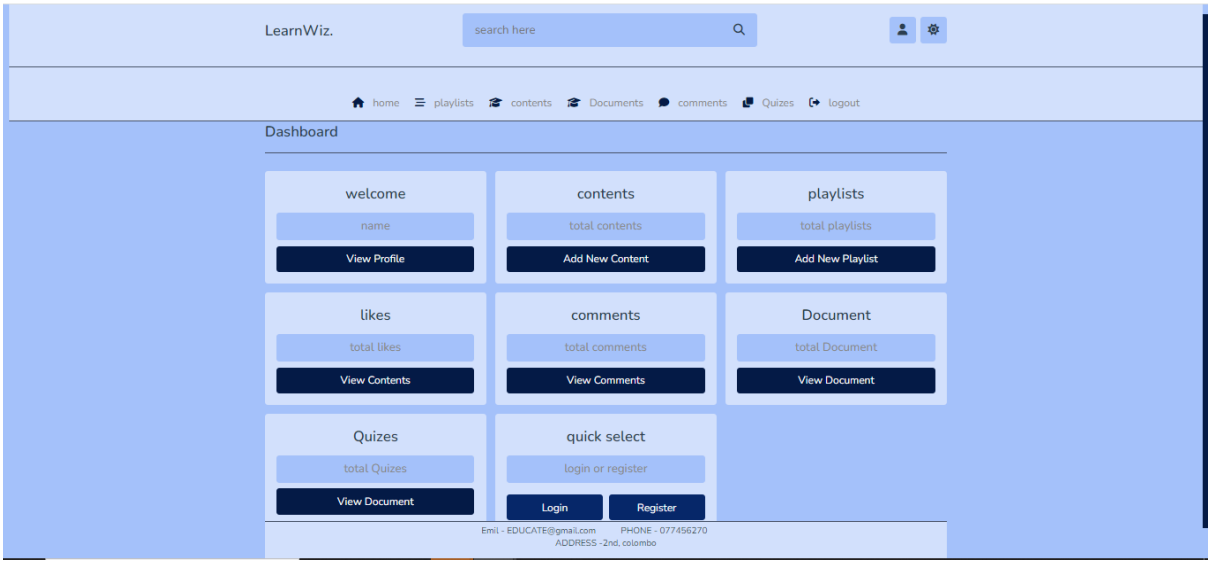

- These 2 pages are REGISTRATION & LOGIN for tutor(admin)

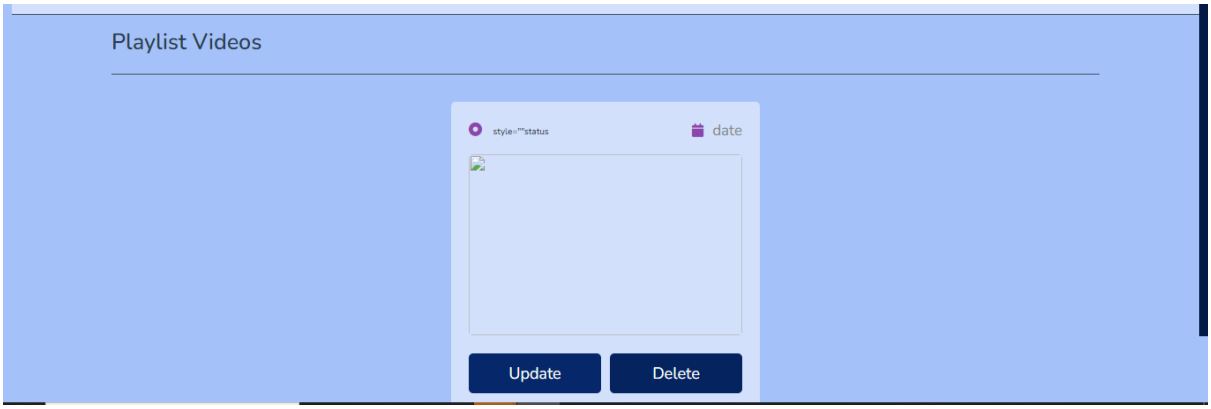

This is the quiz section, admin has to face this before registration.

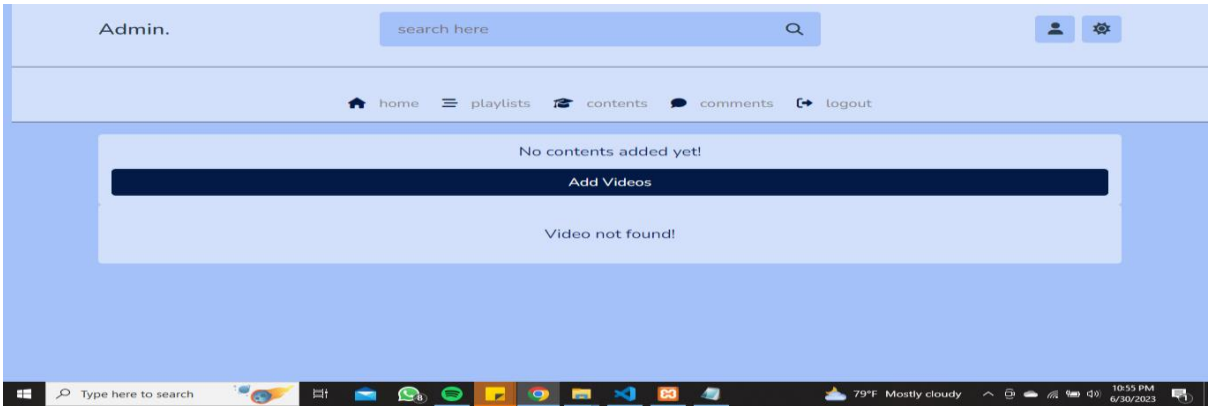

- This is ADMIN DASHBOARD, by clicking links can see the profile,contents, comments, documents, quizzes and can add new content, new playlist and also admin can login and register.

.

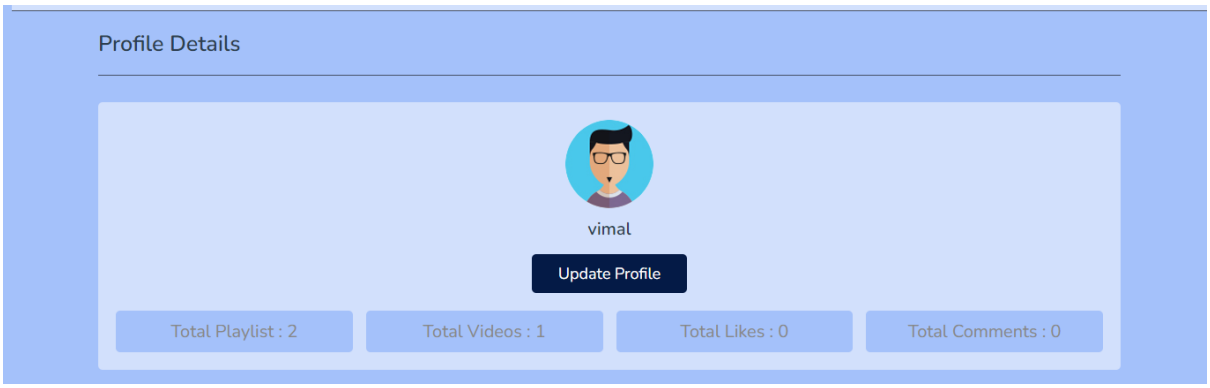

- This page is used to view created playlists on the admin side.

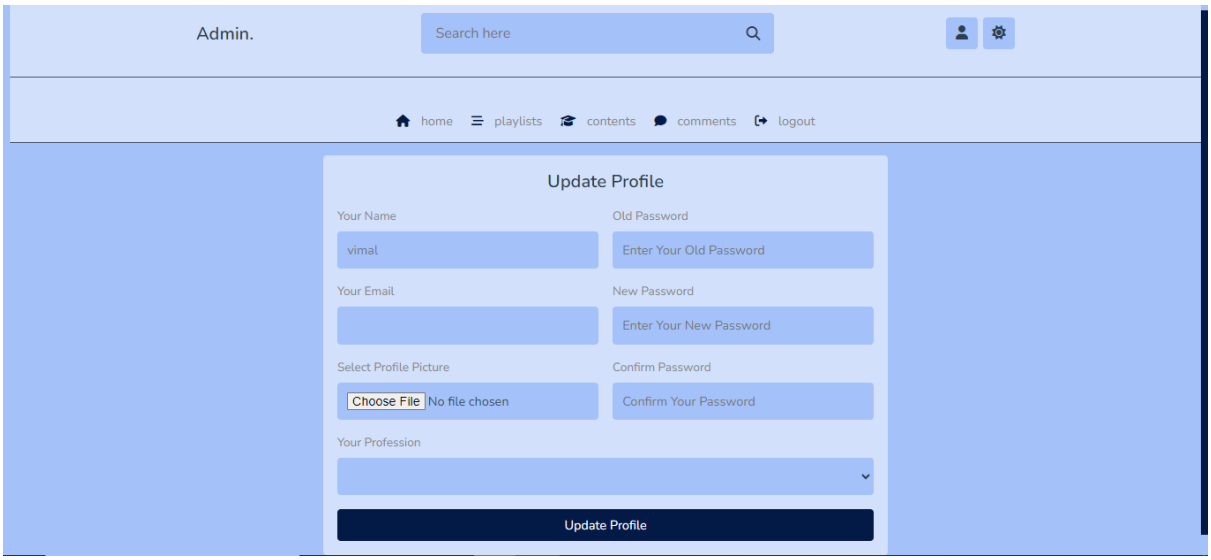

- Admin can see the uploaded videos here, and related comments.

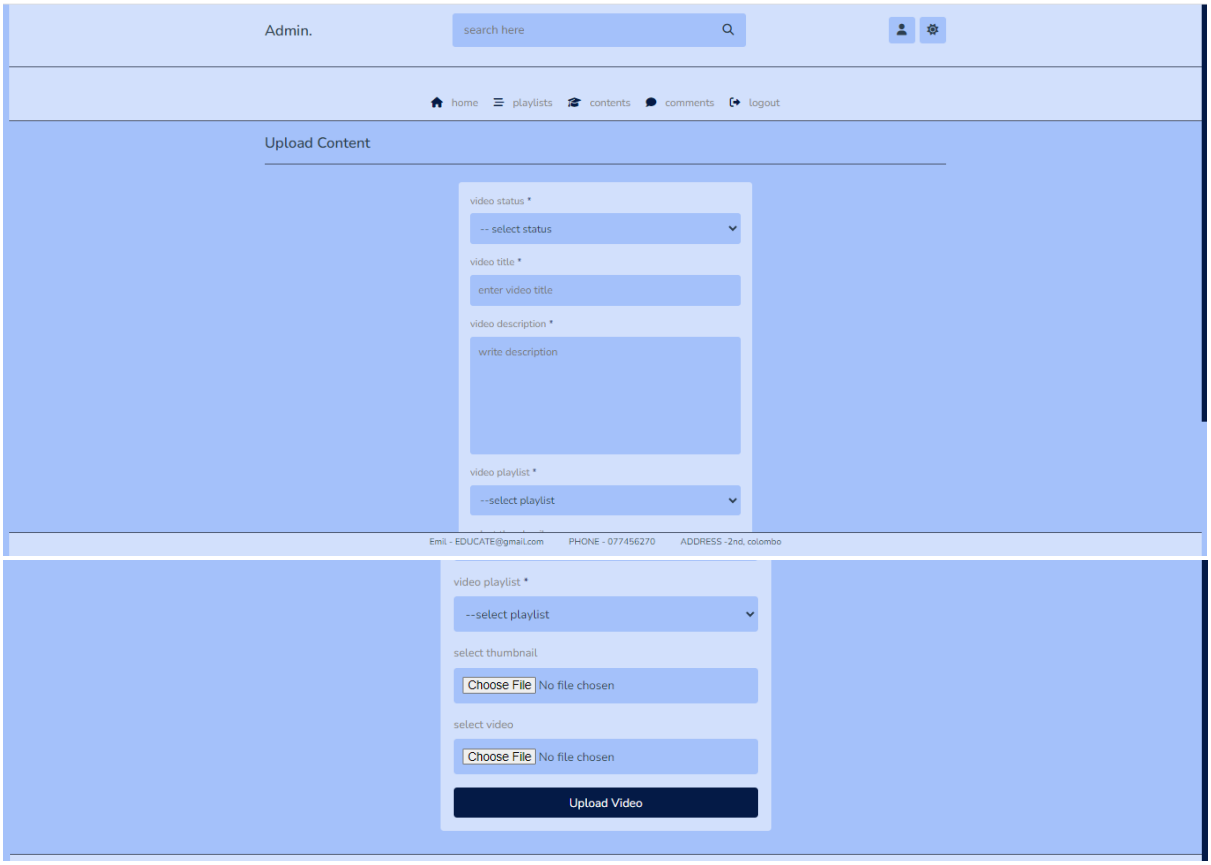

- This page is used to see the specific tutors contents(videos), and also tutor can upload content by clicking add content button.

- This is for admins to check their profiles and also they can also update their profile by clicking UPLOAD PROFILE button

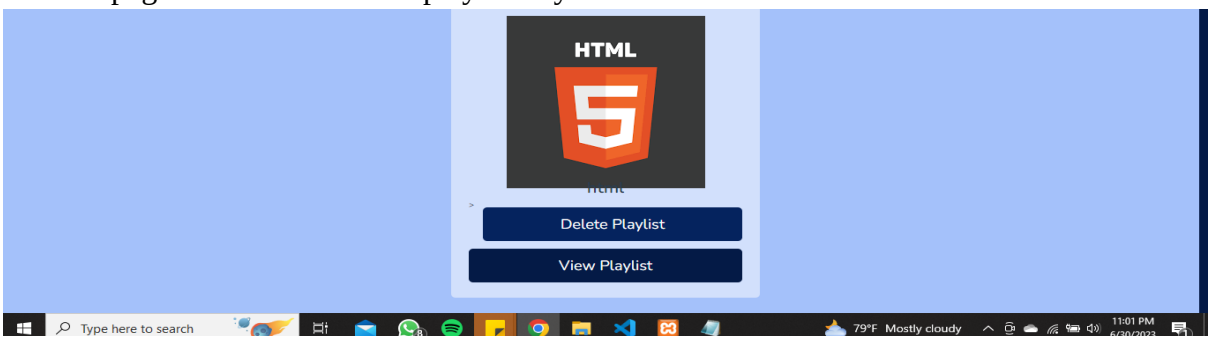

- This page is used to update profile of admins

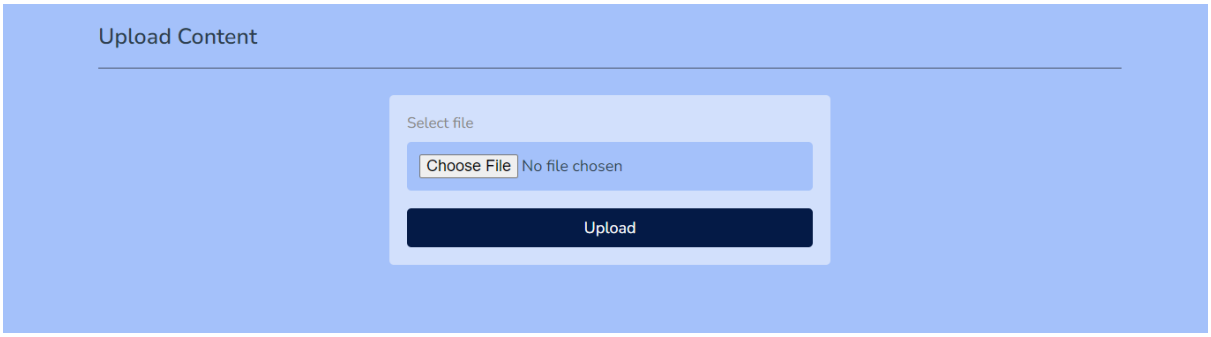

- This page is used to upload content by admin

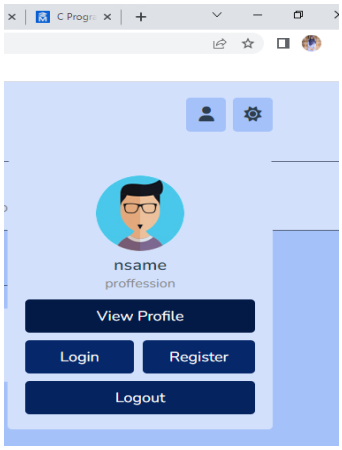

- These 2 pages are used to create playlists by admin.

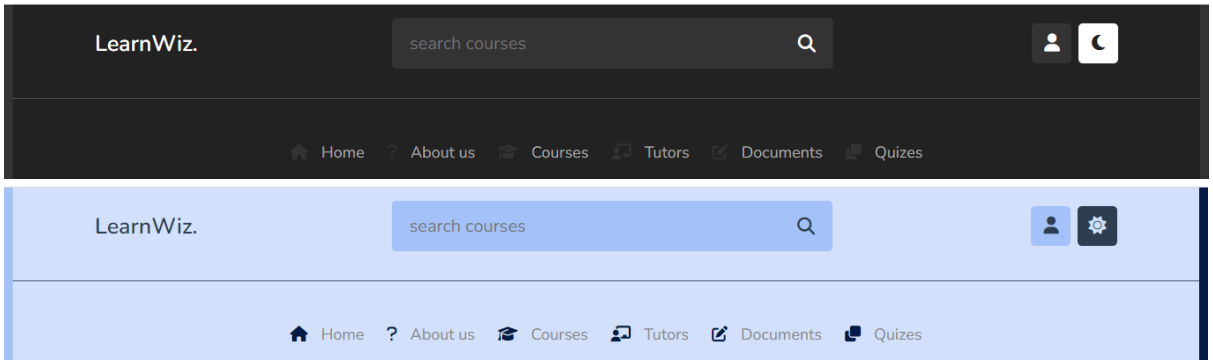

- This page is used to view documents by uploaded admin

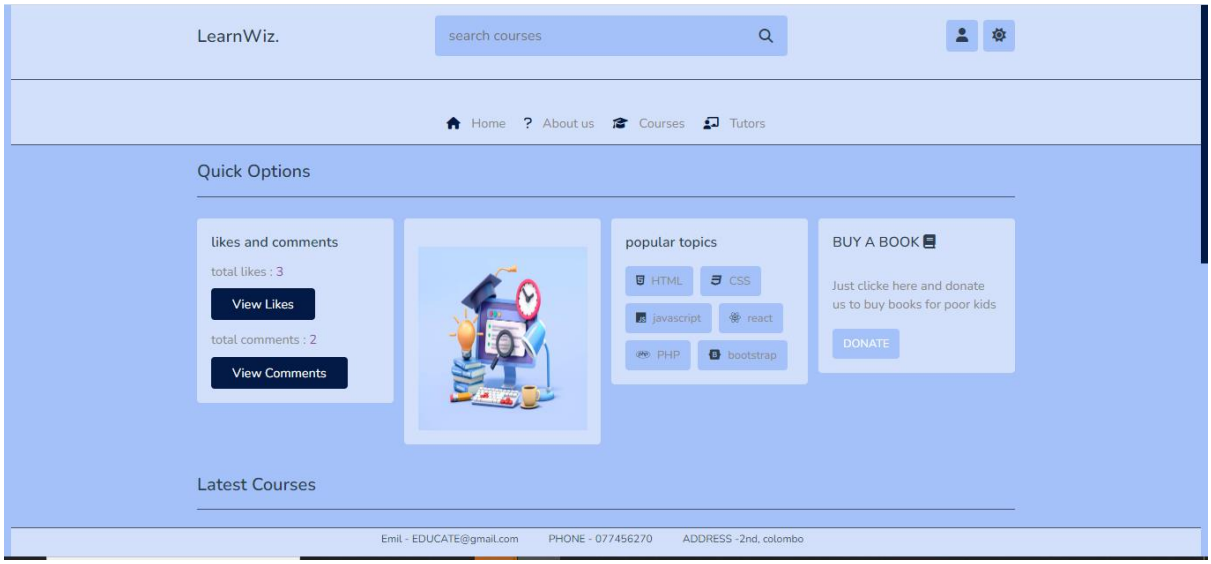

- This page is used to upload documents by admin

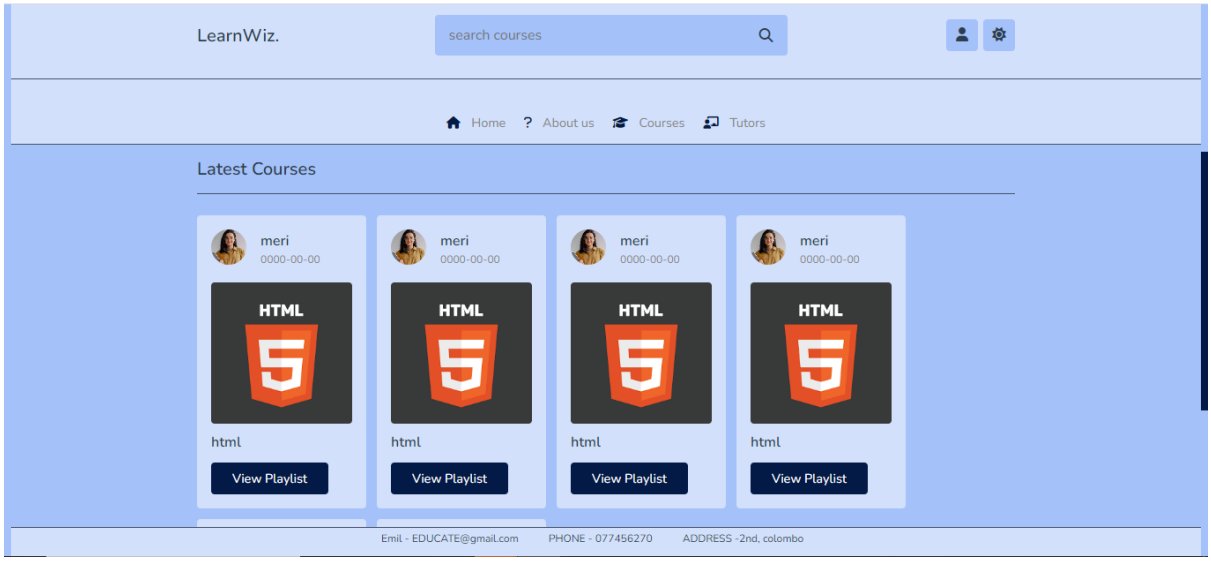

- we can see this part by the right side corner user button, by this can see the profile &, can go to logout, login register pages(Adimin).

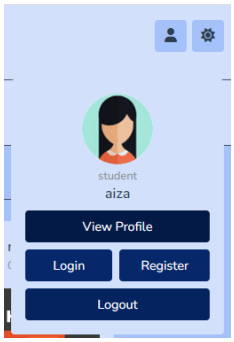

- These 2 are admin header part and navigation bar, by clicking sun & moon icons,can change the theme colours,

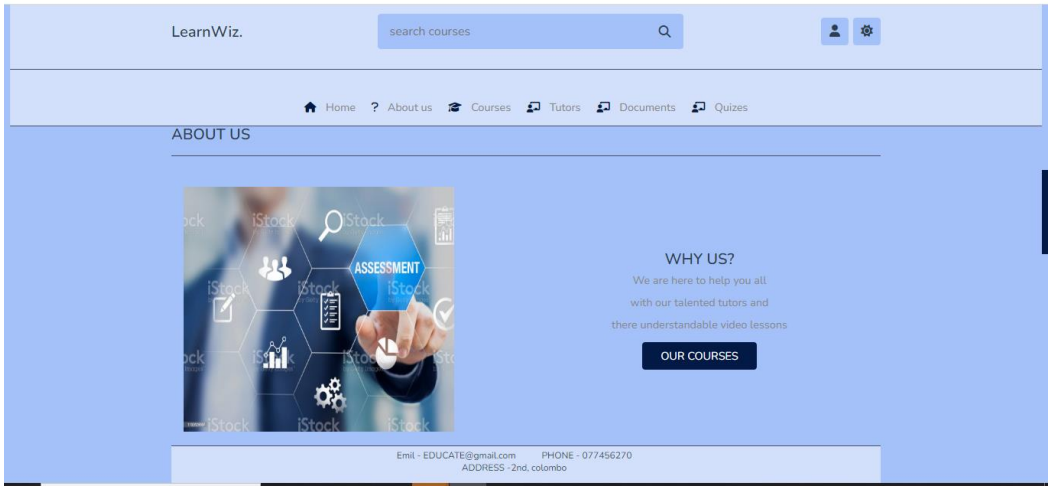

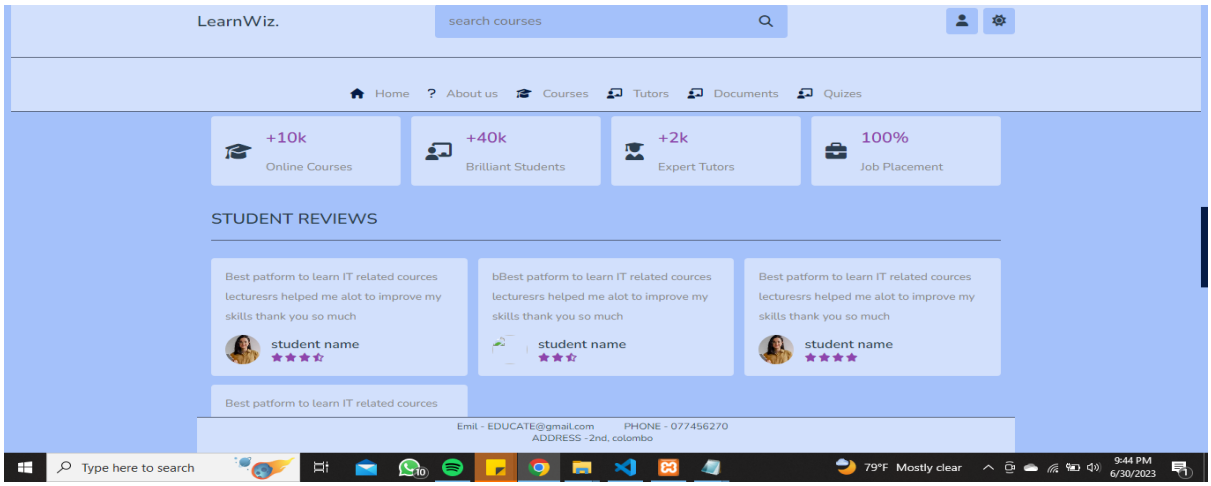

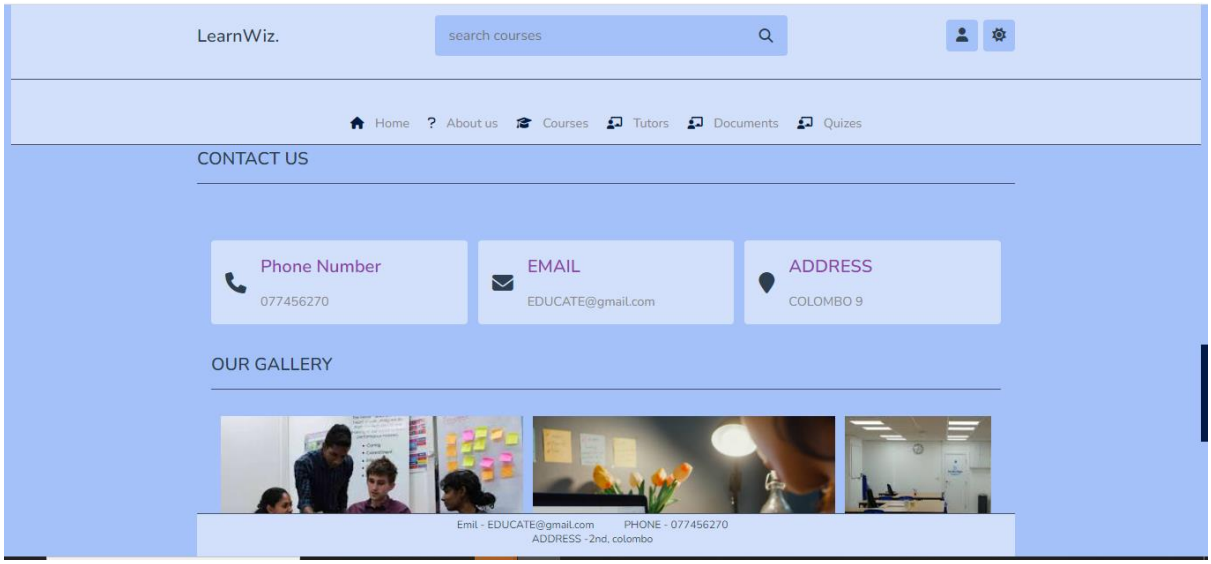

- These 2 pages are registered user home pages, by clicking VIEW PLAYLIST student can see playlists

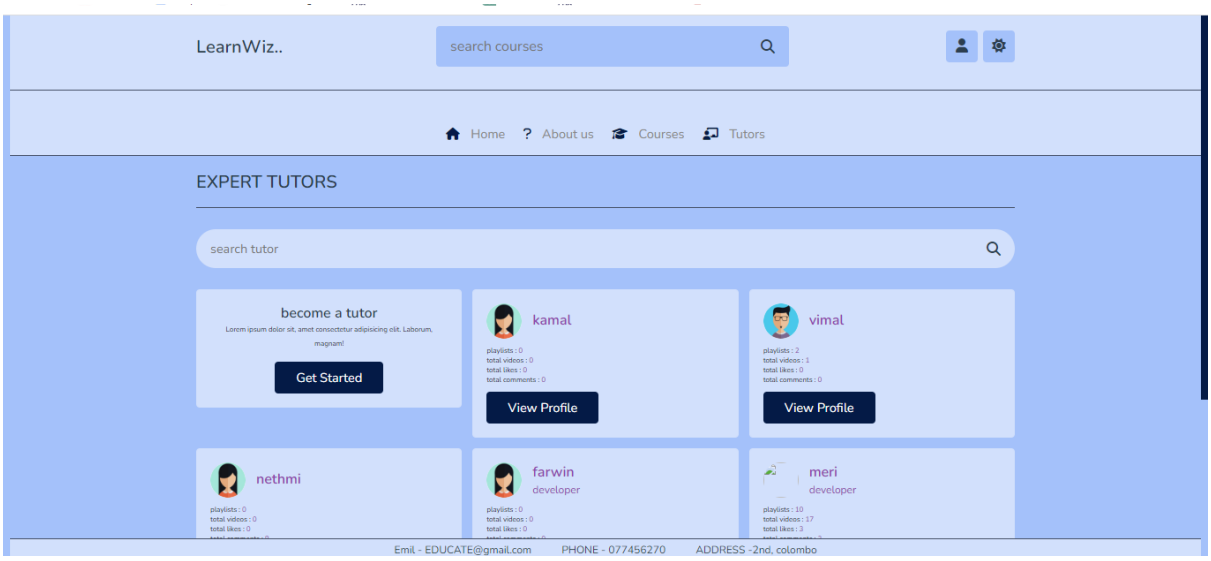

we can see this part by the right side corner user button, by this can see the profile &, can go to logout, login register pages.

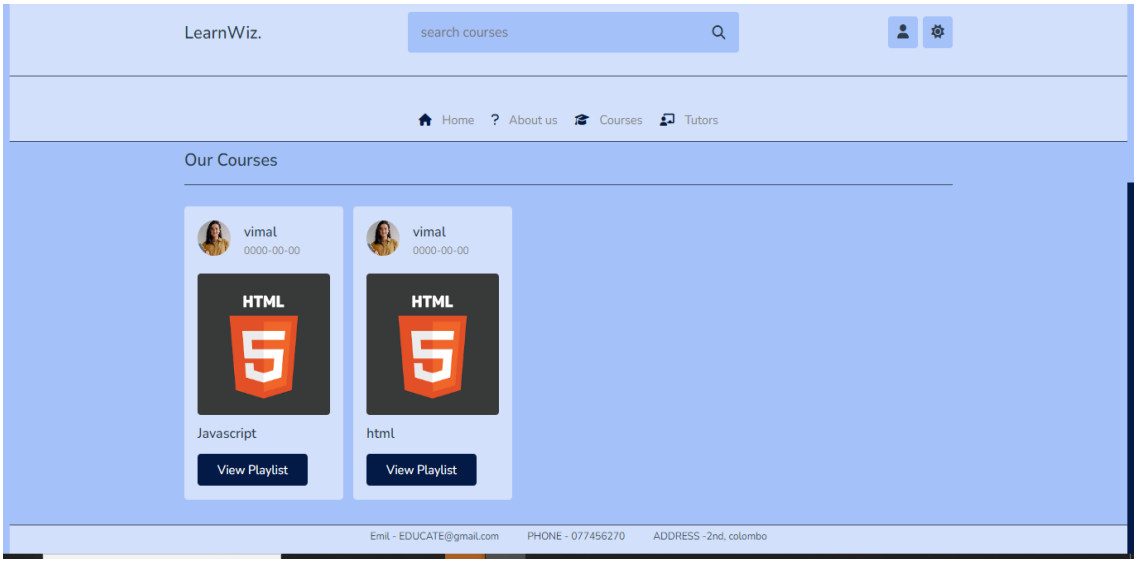

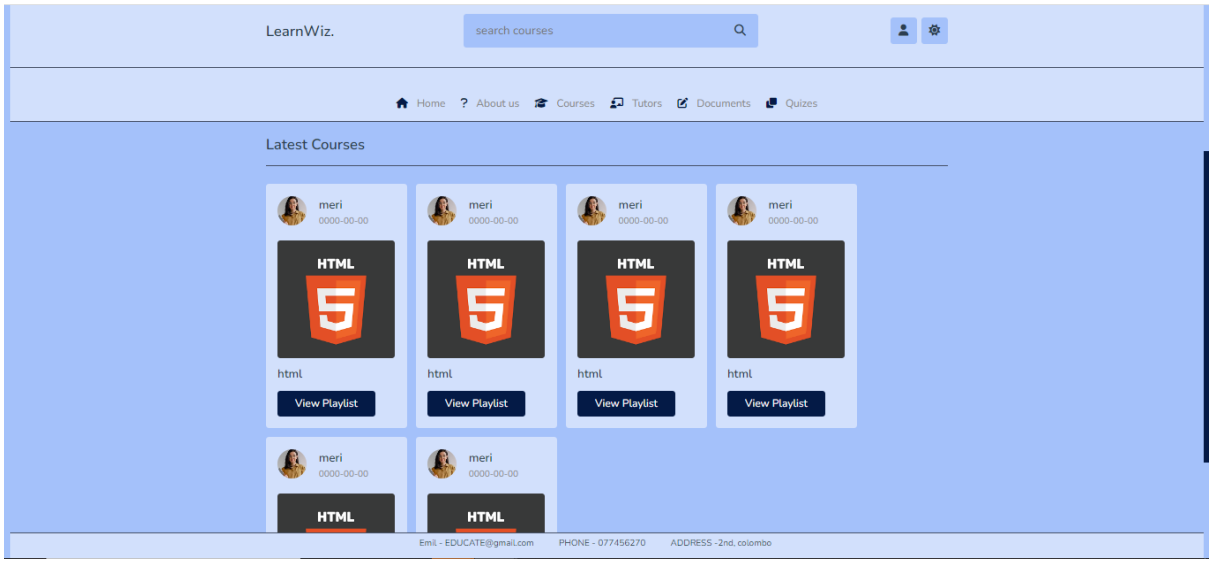

- These 4 pictures are ABOUT page pictures by clicking OUR COURSES it will redirect to courses page, in this page we can see student reviews , gallery & contact details

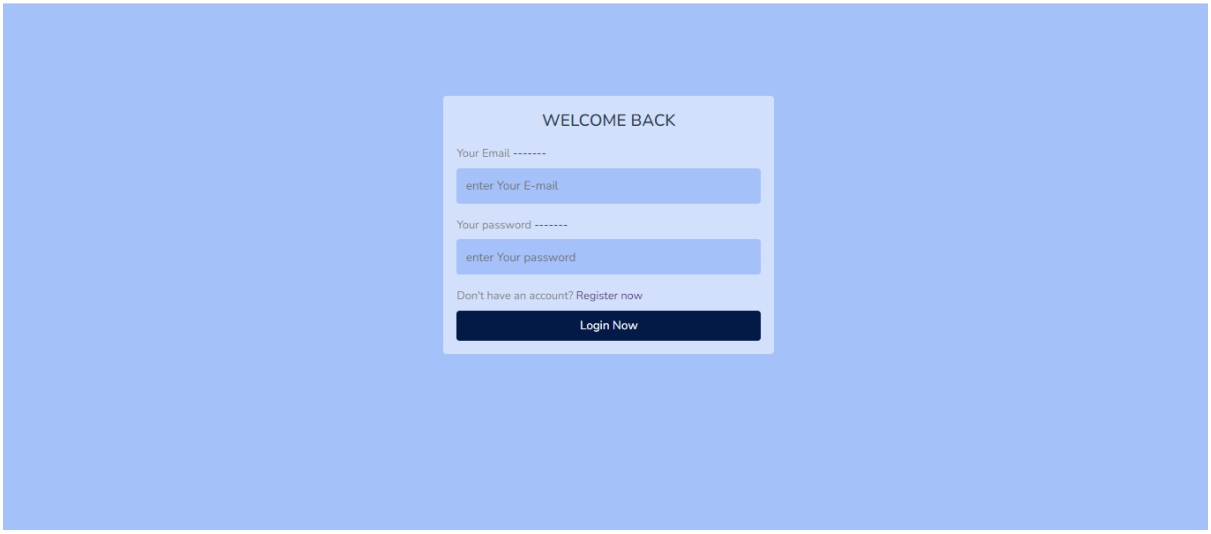

- This page is a TUTOR PROFILE page which can be seen by users, by clicking VIEW PROFILE, users can see tutor profile.

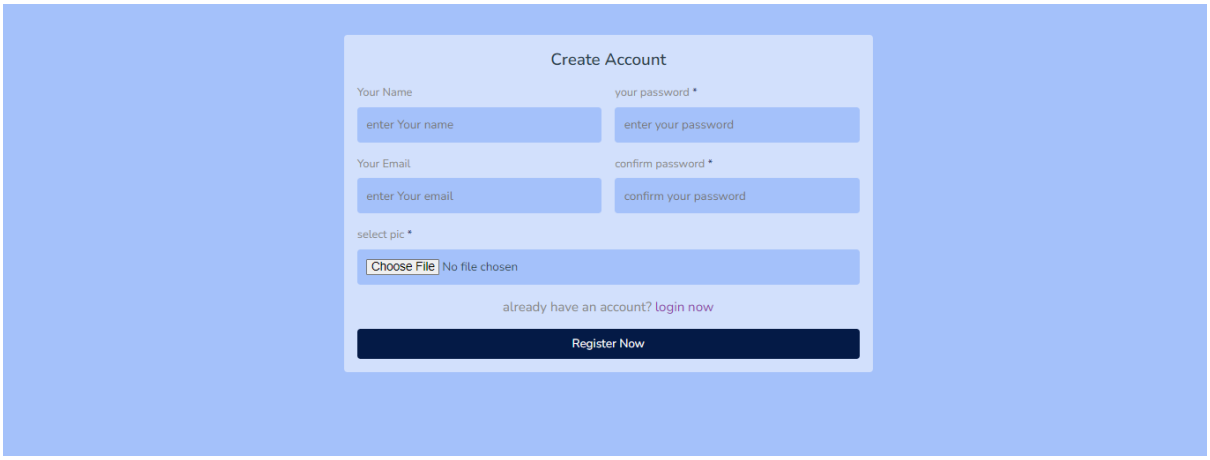

In the same page under the profile you can see playlists.

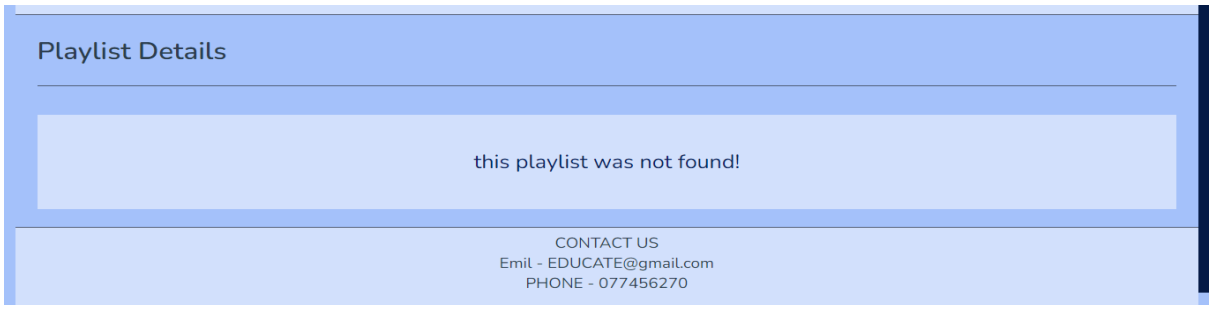

- In this page you can see playlists of courses that offer to students by LEARNWIZ

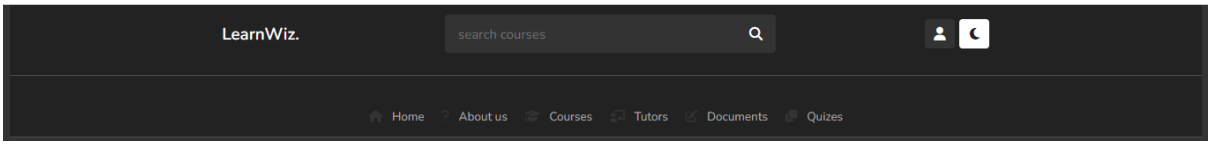

- This page is used for student(users) login.

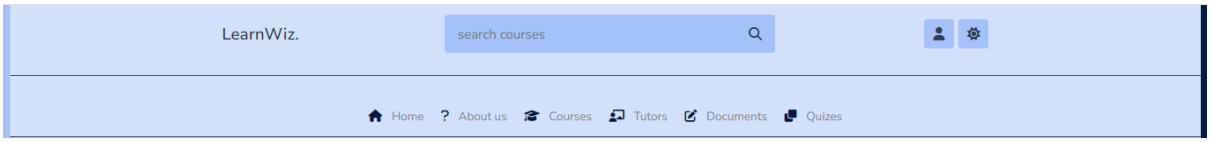

- This page is used for student(users) registration.

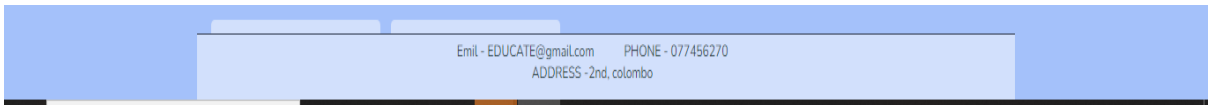

- In this page students can see uploaded playlists

- These 2 images are header part and navigation bar of user side

- This is the footer of website
-

- Videos will play like this, in here students can like & comment

- This part will appear under videos, in here user can add comments, also they can edit after uploading
