The Finalized Topic

Selected Topic: IT in Governance
Topic: Garbage Management Website

What Is Stakeholder Analysis?

The process of gathering data on anyone who the project will influence is known as stakeholder analysis. A stakeholder analysis is a process of identifying these people before the project begins; grouping them according to their levels of participation, interest, and influence in the project; and determining how best to involve and communicate with each of these stakeholder groups throughout.

Stakeholders refer to those individuals or groups that depend on an organization to fulfill their own goals and on whom, in turn, the organization depends.

Who are the stakeholders of your project?

Municipal Council management committees
Garbage collectors
Garbage truck drivers
Residents (People living under the municipal council)
IT team

Why Stakeholder Analysis Is Important?

Each stakeholder will have a different understanding and different needs for the outcome, and conducting early stakeholder analysis can help to control damages, cost, and time, and also stakeholder analysis will help to understand the needs, favours, and against of each stakeholder.
Conducting a stakeholder analysis can be strategically valuable when kicking off any type of complex company undertaking. The more stakeholders we can identify early on and the more we can tailor our communication to win approval and support from various stakeholders, the more likely our project is to succeed.

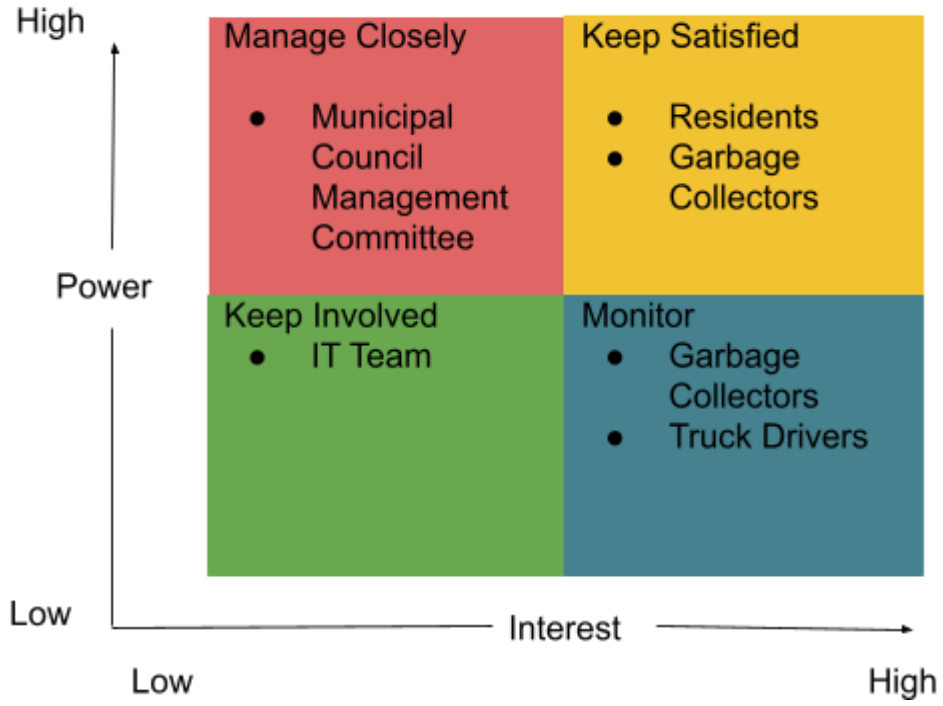

- To enlist the help of key organizational players
- To gain early alignment among all stakeholders

- To help address conflict or issues early on

When to Use Stakeholder Analysis?

Conducting stakeholder analysis at the beginning stage is better because it will help to understand the stakeholders and their needs, and incorporate those needs into the project. It will reduce cost, time, energy, and everything. Also, stakeholder analysis should be revisited periodically to ensure that the initial understanding of stakeholders is still accurate and that engagement strategies remain effective.

Stakeholder Analysis for the selected Project

Stakeholder Name	Power Over The Project	Interest Over The Project	What is important to the stakeholder	How could the stakeholder contribute to the project
Municipal Council management committees	High	High	● Efficient operations, ● Cost effectiveness, ● Public satisfaction	● Approve features and implementations ● Set policies
Garbage collectors	Medium	High	● Clear schedule ● Less workload	● Give feedback on usability, ● Report operational issues.
Garbage truck drivers	Medium	Medium	● Timely pickup ● Clear schedule	● Report delays/issues ● Track task completion
Residents	Low	High	● Clear surrounding ● Timely garbage collection ● Solutions for complaints	● Submit pickup requests ● Provide feedback ● Report issues
IT team	Medium	High	● User satisfaction ● Bug-free platform ● Secure system	● Design, develop, and maintain the website ● Fix bugs ● Ensure smooth technical performance
